

Arielle Berman
Website Design – Markup Details

Project Gallery Functionality:
- The description text under the project gallery is to always be visible within the browser (up until 20px below the DOWN ARROW).

- Project gallery image to be flexible in width as well as height – always hitting either the minimum height or width (which ever hits first depending on landscape vs. portrait image)

- Project gallery image area will have a MINIMUM dimension of W649 x H430px (1:1.5 ratio)
Once the MINIMUM dimensions for the images are met, and If browser height becomes smaller, the browser will encrouch over the text.

- Project gallery image area will have a MAXIMUM dimension of W1400 x H930 (1:1.5ratio).
Once these images reach their maximum dimension, the white left/right margin area (curently set as 60px) will start to grow when browser width is larger.
This white left/right margin area's 60px is its MINIMUM spacing.

Note: This example here is the absolute minimum spacings for all elements:
- Image size
- Spacing between side images

If browser width is smaller than this (768px [ipad width]), then it becomes the mobile view.
